

# Perception Testbed Fog Chamber Data Documentation

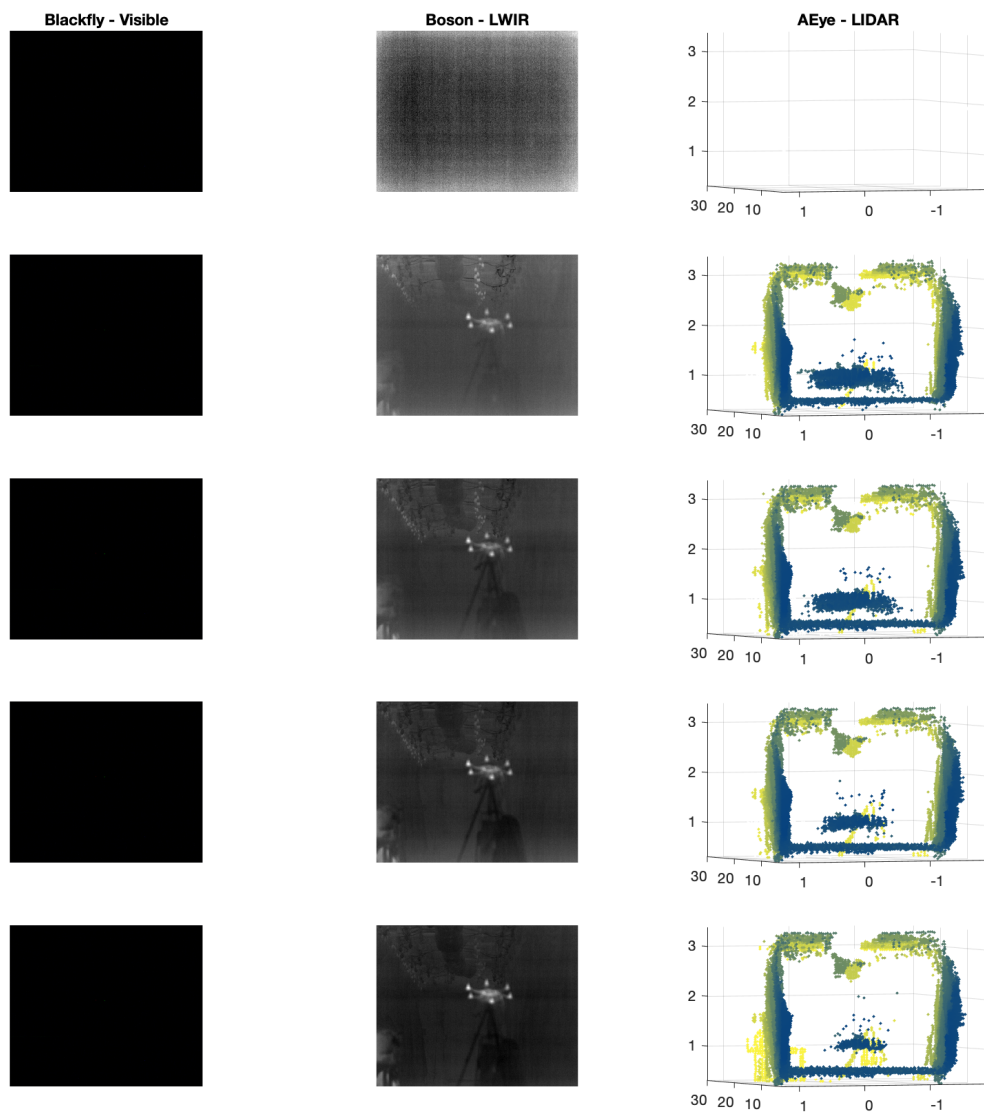

November 1, 2021

**Experiment Name:** fog18  
**Start Time:** 13-May-2021 15:41:42.650  
**Duration:** 00:48:00.116  
**Target:** UAV-Oncoming  
**Target Distance:** 18.2372 meters  
**Target Temperature:** N/A  
**Environment Notes:** None.

**File Information:**  
**Visible Spectrum:** 25992 Images  
**Longwave Infrared:** 28800 Images  
**LIDAR:** 2789 Data & Images

## 1 Data Snapshot: fog18

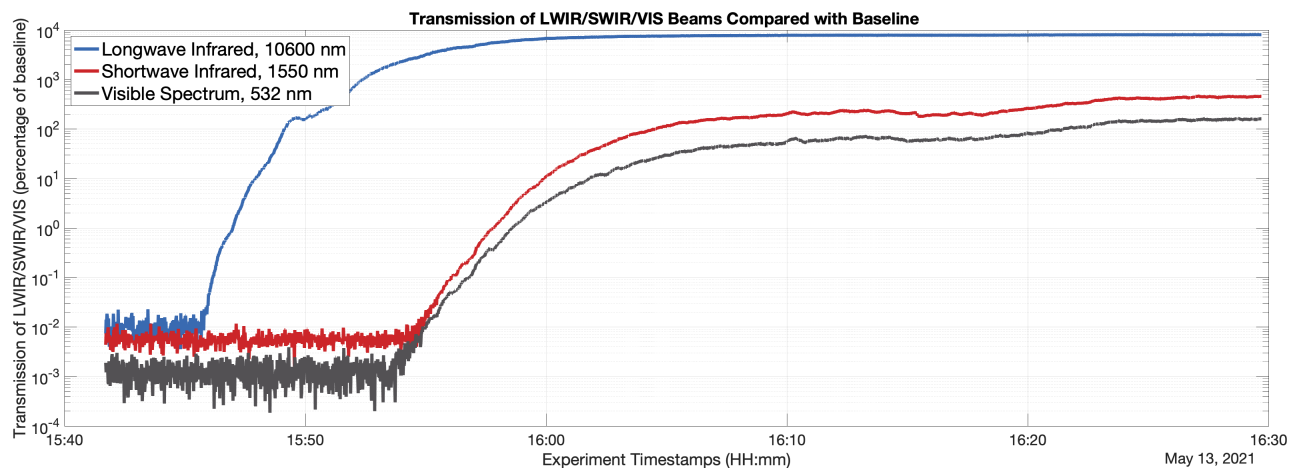

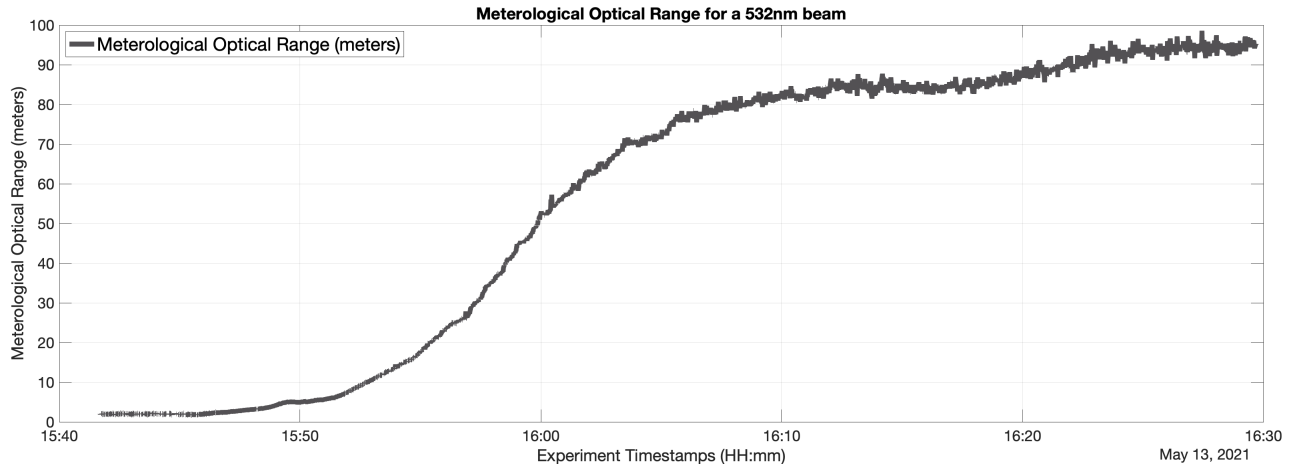

The following images describe the variation in data during the experiment.

## 2 Experiment Environment: fog18

The following graphs show the variation in the environment during the experiment.

## 3 Experiment Setup and Equipment Specifications

### 3.1 Perception Testbed Hardware

A novel testbed, featuring a visible spectrum camera, a longwave infrared camera, and a lidar was built and transported to the Fog Chamber at Sandia National Laboratories for fog chamber testing. The perception testbed features the following equipment:

- FLIR BlackFly - Visible Range Camera
- FLIR Boson – Long wave infrared thermal camera
- AEye Intelligent LIDAR

### 3.2 Environment Monitoring Equipment

During fog experiments, the following equipment was used for characterization of the fog and light scattering resulting from the fog:

- Malvern Spraytec instrument with inhalation cell accessory - produces a measurement of fog particle sizes, this information is useful in understanding light scattering.
- Transmissometer – used in measuring the Meteorological Optical Range (MOR) a light emitting diode and camera are used under a static distance to measure the optical effects of the fog.

## 4 Useful References

The following documents may be useful in understanding the scope and context of the experiments.
